

WHITNEY FRISBY

Philadelphia, PA | 215-454-0430 | frisw04@gmail.com

SOFTWARE QA TESTER | AI-ASSISTED SOFTWARE TESTING | MANUAL QA

PROFESSIONAL SUMMARY

Software QA and technology professional with hands-on experience developing, testing, and troubleshooting an independent iOS/iPadOS application using AI-assisted development workflows. Experienced in manual and regression testing, defect reproduction, cross-device testing, diagnostic log analysis, data persistence testing, and cloud synchronization testing. Skilled at translating observed software behavior into reproducible test scenarios, investigating failures, collaborating with AI coding tools to identify potential causes, and verifying software fixes. Brings additional professional experience in monitoring, incident documentation, problem identification, and procedural compliance.

TECHNICAL SKILLS

Testing & Quality Assurance: Manual & Functional Testing | Regression Testing | Bug Reproduction | Test Scenario Development | Cross-Device Testing | Defect Documentation | Root-Cause Investigation | Fix Verification | UI & State Testing | Persistence & Synchronization Testing

AI-Assisted Development & Testing: AI-Assisted Software Development | AI-Assisted Debugging & Code Investigation | AI Output Evaluation | Prompt-Based Technical Investigation | Iterative Testing & Verification | Requirements & Behavior Definition

Development & Tools: Xcode | Swift / SwiftUI Familiarity | iOS & iPadOS Testing | Git / GitHub | SwiftData | CloudKit Synchronization Testing | Microsoft Office 365

PROJECT EXPERIENCE

Living Pages - Independent iOS/iPadOS Application

Developer & QA Tester

- Develop and systematically test an independent journaling application for Apple platforms using AI-assisted development workflows.
- Perform functional, regression, usability, and cross-device testing on physical iPhone and iPad devices.
- Reproduce and investigate software defects involving UI behavior, application state, autosave, device rotation, page navigation, data persistence, and cloud synchronization.
- Design controlled test scenarios to distinguish failures involving the user interface, local persistence layer, and cloud synchronization.
- Analyze diagnostic application logs and compare expected versus actual behavior to narrow potential root causes.
- Test SwiftData persistence and CloudKit synchronization across application relaunches and multiple physical devices.
- Document defects, reproduction conditions, observed behavior, and verification results throughout iterative development.
- Evaluate AI-generated code changes and technical recommendations through builds and real-device testing rather than assuming generated solutions are correct.
- Re-test attempted fixes and continue investigation when changes fail to resolve the original defect.
- Translate desired application behavior into clear requirements and testing criteria for AI-assisted implementation.

PROFESSIONAL EXPERIENCE

Allied Universal - Pennsylvania

Security Guard / Dispatcher / Trainer, PA | 10/2016 - Present

- Monitor operational environments, identify irregular activity, and accurately document incidents and findings.
- Analyze situations, determine appropriate responses, and communicate findings to supervisors and stakeholders.
- Maintain detailed reports requiring accuracy, attention to detail, and adherence to established procedures.
- Use monitoring systems and technology to identify potential problems and escalate issues appropriately.

Wawa - Brookhaven, PA

Customer Service Associate | 04/2011 - 10/2016

- Resolved customer issues through investigation, communication, and problem solving.
- Maintained accurate transaction records and followed established procedures.
- Identified and escalated unresolved issues to appropriate personnel.

EDUCATION

DeVry University - Coursework toward Bachelor's Degree - Software Design & Programming

DeVry University - Associate of Applied Science - Cybersecurity and Networking

CHI Institute - Broomall, PA - Associate of Science - Network Engineering

ADDITIONAL TRAINING

Cybersecurity Career Accelerator - Internship On Demand (IOD)

- Completed hands-on training involving vulnerability analysis, networking concepts, security investigation, and technical problem solving.

Mastercard Cybersecurity Virtual Experience Program - Forage

- Completed cybersecurity analyst simulation involving threat identification, analysis, and reporting.

AIG Shields Up Cybersecurity Virtual Experience Program - Forage

- Completed vulnerability research, threat analysis, and technical communication exercises.
